

Yoked into the Syzygy  $(-y, x)$

$$\overbrace{(-y)}^{\text{Coeff } a} \underbrace{x}_{\text{Generator } f_1} + \overbrace{xy}^{\text{Coeff } b} = 0$$

$$\text{Syz}(x, y) = R \cdot (-y, x)$$

The generators  $x$  and  $y$  are not isolated;  
they are **yoked together** by this fundamental relation.
