

Three spectra with concrete ideals

Concrete ideals: $\langle x-1 \rangle \subset \mathbb{C}[x]$, $(3) \subset \mathbb{Z}$, $\langle x+1 \rangle$, $\langle x^3+x+1 \rangle$, $\langle x^3+x^2+1 \rangle \subset \mathbb{F}_2[x]$.
Same visual rule in all three worlds: quotient by an ideal means cut out the point(s) determined by that ideal.
